

## PRESS INFORMATION

### **Olympus Launches Endoscopic Flushing Pumps OFP-3 and OFP-3 PLUS in Europe**

**Hamburg, March 17, 2026 – Olympus Corporation (Olympus), a global MedTech company, announced the launch of the OFP-3 and OFP-3 PLUS pump systems in Europe. The latest generation includes a new pump head indicator and advanced fluid management features.**

OFP-3 and OFP-3 PLUS are endoscopic flushing pumps that widely support endoscopic examination and treatment. Applications during endoscopic procedures include the irrigation of gastric and colonic mucosa to improve visualization, diagnosis and therapy, as well as controlled fluid injection for endoscopic submucosal dissection.

#### **Intuitive handling, precise flow control and safe operation**

The new OFP-3 and OFP-3 PLUS pump systems are designed to support ease of use and navigation for users. Configurable pre-set flow rate buttons (Low, Medium, and High) have been added for quicker flow rate change. Users can now assign a number of their preference to the respective flow rates buttons, which contributes to improved usability. To ensure optimum working performance, the flushing pumps are newly equipped with a worn pump head and service indicator, which records various elements of usage and signifies when the pump head should be replaced.

Furthermore, the OFP-3 PLUS offers two new features for improved fluid management. A bottle illumination functionality makes it easier to monitor the amount of liquid remaining, minimizing disruption during procedures. And an integrated warming plate supports healthcare providers in maintaining the temperature of the pre-warmed fluid throughout endoscopic procedures to enhance comfort for their patients.

Both OFP-3 and OFP-3 PLUS are now commercially available in Europe, with other global regions to follow at a later date, pending regulatory approvals including product registration and market clearance.

#### **About Olympus**

At Olympus, we are committed to Our Purpose of making people's lives healthier, safer, and more fulfilling. As a global medical technology company, we partner with healthcare professionals to provide innovative solutions and services for early detection, diagnosis, and minimally invasive treatment, aiming to improve patient outcomes by elevating the standard of care in targeted disease states.

For more than 100 years, Olympus has pursued a goal of contributing to society by producing products designed with the purpose of delivering optimal outcomes for its customers around the world.

Olympus Europa, headquartered in Hamburg, Germany, serves the EMEA (Europe, Middle East, Africa) Region and employs 7,600 people in 29 countries.
