PEDIATRIC BRONCHOSCOPY

Flexible bronchoscopy is widely used in the diagnosis of respiratory pathologies in children of all ages. Biopsies, bronchoscopic cytology, and foreign body removal present common challenges that can be met by the selection of the appropriate techniques and instruments.

EVIS EXERA III

Video Bronchoscope BF-XP190

The world's slimmest chip-on-the-tip video bronchoscope BF-XP190 is the latest flagship model for pediatric bronchoscopy providing not only stunning image quality but also offering compatibility with 1.2 mm EndoTherapy instruments. Further highlights are the unique insertion tube rotation function and wide upward angulation range of 210° improving handling and in-procedure maneuverability of the new ultraslim video bronchoscope.

- Distal end Ø: 3.1 mm
- Insertion tube Ø: 2.8 mm
- Instrument channel Ø: 1.2 mm

Pediatric Instruments — Mini Devices for Diagnosis and Intervention

Olympus offers a full line-up of instruments for pediatric bronchoscopy which is compatible with 1.2 mm channel bronchoscopes. This range covers grasping forceps and baskets for foreign bodies of different shapes and surfaces and biopsy forceps and cytology brushes for diagnosis even from the small bronchi.

Biopsy Forceps

- Rat tooth to aid anchorage
- Elongated cups for deeper biopsies

FB-56D-1

Cytology Brush

- For optimized cytological yield
- Sheathed and unsheathed types

BC-203D-2006

Grasping Baskets

- For retrieval of smooth, rounded objects

FG-55D

Grasping Forceps

- For retrieval of irregular objects
- Nails bite into soft objects for improved grip

FG-54D

Foreign Body Removal Snare

- For retrieval of long, thin objects

FG-36D
